

IL SERIES

INLINE SLEEVE WRAPPER. Polypack's IL series machines are inline shrink wrappers designed to provide a bullseye wrap to products longer than 4 inches. These machines have belt-to-belt transfers, controlled by motor inverters for positive transfers. The IL series shrink bundling machine can be installed at the end of a tray multipacker to shrink wrap each tray after they are formed and loaded.

POLYPACK'S IL SERIES machines are available as stand-alone systems that can either be handloaded or fed by an existing conveyor. The IL series machines are also available with a wide array of product collation modules as well as a pad feeder to create pad-supported shrink multipacks.
